JOBS IN GEORGIA'S MUNICIPALITIES: DISTRIBUTION, TYPE, AND QUALITY OF JOBS

Introduction

This brief focuses on the employment in Georgia municipalities. In particular, it discusses the distribution, type, and quality of jobs. Data from the Georgia Department of Labor provide information at the establishment level about employment characteristics such as number of employees and average wages by industry and municipality.

Data

The Quarterly Census of Employment and Wages[1] (QCEW) data set contains establishment[2]-level data collected by the Georgia Department of Labor. The data are compiled from quarterly returns filed by each employer in the state of Georgia covered by the unemployment insurance program. This brief uses QCEW data from 2009, the most recent data available.

The QCEW data does not include self-employed individuals or members of the armed forces. A private establishment is included if it employs one employee for at least 20 weeks or has a quarterly payroll of $1,500 or more. A farming establishment is included if it employs 10 or more employees for at least 20 weeks or has a quarterly cash remuneration of $20,000 or more.[3] The data includes local, state and federal government employment. Reporting the data is also limited by confidentiality rules.

The physical address for each establishment is included in the data set. The address information is geo-coded to provide a spatial reference for each establishment. The geo-coding process results in matching approximately 76 percent of all establishments and 81 percent of total employment to a location within the state. The match is not 100 percent because some QCEW returns contain missing or incomplete addresses or report addresses that cannot be geo-coded, such as a post office box. Since the inability to geo-code an establishment does not represent a random sample of establishments, the undercount of employment is not likely to be uniform across municipalities. Because of this, our analysis is more likely to under report employment in smaller, more rural municipalities, than larger ones.

Number of Jobs by Municipality

According to the Bureau of Labor Statistics, the state of Georgia employed about 4 million[4] individuals in 2009. Table 1 describes the percentage of total state jobs by municipality. Employing a little over 300,000 jobs, the establishments within the city of Atlanta hold the largest share of total state employment, 8.10 percent. The municipalities of Sandy Springs, Savannah, and Augusta follow Atlanta as the next largest employment places. Rounding out the top five,

Note: The dashes indicate either no employers or employers that cannot be reported for confidentiality reasons. A municipality may have employment in a certain NAICS category but the percentages are only reported for NAICS categories with more than 2 establishments. Due to this restriction the summation across all categories will not equal 100%.

TABLE 3. CLASSIFICATION OF THE QUALITY OF JOBS

NAICS Codes	Type of Job
*Premium Jobs**	
55	Management of Companies
22	Utilities
51	Information
54	Management, Science, and Technology
52	Finance and Insurance
42	Wholesale Trade
21	Mining
33	Manufacturing
Mid-Range Jobs	
92	Government
48-49	Transportation and Warehousing
23	Construction
31-32	Manufacturing
53	Real Estate and Rental and Leasing
62	Health
61	Education
Low-Paying Jobs	
56	Administrative and Support
71	Leisure
81	Other Services
11	Farming
44-45	Retail Trade
72	Hospitality

*The missing NAICS code is included in the premium jobs category because the average annual wage in that category is larger than $50,000

Columbus establishments employ just fewer than 67,000 employees or 1.76 percent of total state employment.

Figure 1 shows the spatial distribution of jobs across Georgia's municipalities. The map demonstrates that the more rural southern areas of the state have clusters of economic activity associated with larger cities. This is in contrast to the more populous northern part of the state where employment is much greater and more evenly distributed due to the greater number of municipalities in counties and the increased uniformity in size.

Type of Job by Municipality

Table 2 details jobs by the type of industries by municipality. The two-digit NAICS codes are used to classify establishments by industry. The distribution of jobs by industry is quite varied across the state. Wholesale and retail trade, health care and social assistance, leisure and hospitality, and educational services are top four industries represented in the state in terms of employment within municipalities.

Quality of Job by Municipality

The quality of each job is defined as premium, mid-range, or low-paying based on the average wage paid by each establishment.[5] This classification is determined for each industry (NAICS code). Essentially, the quality of a job is based on the annual wage or salary received by the worker. The premium job pays over $50,000 per year; the mid-range job pays between $35,000 and $50,000 per year; the low-paying job pays below $35,000. Table 3 presents the breakdown of the three job quality categories by NAICS code.[6]

Table 4 presents the share of jobs in each quality category by municipality. There are 43 municipalities that have over 50 percent of employment in the premium job category.

Conclusions

This brief provides a static snapshot of employment across municipalities in the state. The municipalities within the metropolitan statistical area of Atlanta predominate in terms of employment within the state of Georgia. The variation across municipalities certainly changes with time, but this information is insightful for understanding the current allocation of jobs across space.

NOTES:

[1]These data represent the Georgia Department of Labor data that the Fiscal Research Center maintains. The data received minor cleaning and also geo-coded.

2. The unit of observation of this dataset is the establishment and not an employer. In some cases, a single employer has multiple locations. In this analysis each establishment is treated independent of any other establishments. In addition, there are cases where an individual is associated with multiple establishments usually because they have more than one job. In this case, the worker is included in the employment statistics of each establishment to which they are associated.

3. The employer handbook provides more information on which establishments are included and exactly what is reported. http://www.dol.state.ga.us/em/unemployment_taxes_and_benefits.htm

ABOUT THE AUTHOR

Zackary Hawley is Research Associate for the Fiscal Research Center. His research interests include urban and regional economics, public finance, experimental economics and applied microeconomics.

ABOUT FRC

The Fiscal Research Center provides nonpartisan research, technical assistance, and education in the evaluation and design the state and local fiscal and economic policy, including both tax and expenditure issues. The Center's mission is to promote development of sound public policy and public understanding of issues of concern to state and local governments.

The Fiscal Research Center (FRC) was established in 1995 in order to provide a stronger research foundation for setting fiscal policy for state and local governments and for better-informed decision making. The FRC, one of several prominent policy research centers and academic departments housed in the School of Policy Studies, has a full-time staff and affiliated faculty from throughout Georgia State University and elsewhere who lead the research efforts in many organized projects.

The FRC maintains a position of neutrality on public policy issues in order to safeguard the academic freedom of authors. Thus, interpretations or conclusions in FRC publications should be understood to be solely those of the author. For more information on the Fiscal Research Center, call 404-413-0249.
