**Source:** 2000 Census of Population and Housing
Brief History

• Traced back to 600 BC in Athens
• 1638 - first use in America

19th Century

• Switched to value
• Adopted uniformity provision

20th Century

• State use fell
• Exemptions increase
• Tax Revolts
  • 1930s (Great Depression)
  • 1978 (Proposition 13)
Is the Property Tax a Good Tax?

- Stability of revenue
- Mobility of tax base
- Equity
  - Vertical
  - Horizontal
- Fiscal autonomy
- Related to benefits
- Wealth per student varies
- Fiscal competition
- Fiscal restraint
- Unpopular
What is the problem?

- Property taxes are too high?
- Large annual increases in assessed value
- Tax increases are too large
  - Not fair
- Elderly are forced to sell
- Residential vs. business burden is wrong
  - Reduces economic development
  - Capital gain is taxed but not realized
Two Fundamental Questions

What should be the:
- Level of property taxes?
- Distribution of burden?

Two Principles

- Horizontal equity
- Vertical equity
Alternatives

1. Matching Grant

- State matches, say, 50% of current property tax
- Mandated roll back of property taxes
- State matches increases up to CPI + pop growth
- Local government can add 0.5%, but not matched
- More than that requires referendum
2. School Funding Option

- State funds an amount per student, say $9,000

- Systems spending less than $9,000 would eliminate local taxes.

- Systems spending more than $9,000 would cut local taxes, but maintain current spending per student.

- Systems would be guaranteed an increase per student equal to CPI + 0.5%
  - either from the state
  - or local tax revenue

- Referendum to exceed the cap, good for 5 years.
3. Targeted Tax Credit

Credit = property taxes in excess of 2% of income
## Average Credit for by Income

<table>
<thead>
<tr>
<th>Income Group</th>
<th>Number</th>
<th>Average Credit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less than $10,000</td>
<td>78,292</td>
<td>$855</td>
