December 2012, Number 253

## THE CHANGES IN JOBS ACROSS GEORGIA'S COUNTIES Changes in Distribution, Type, and Quality of Jobs in Georgia Counties from 2000-2009

## Introduction

This brief focuses on the changes in employment over the last decade in Georgia counties. In particular, it discusses the distribution, type, and quality of jobs and examines the change in employment in each of these categories from 2000-2009. Data from the Georgia Department of Labor provide information at the establishment level about employment characteristics such as number of employees and average wages by industry and county over time. Overall based on these data, the state experienced job contraction of approximately 4 percent, while the metropolitan statistical area of Atlanta did not experience a change in the number of jobs. The state lost premium and low-paying jobs while it gained mid-range jobs over the last decade. The Atlanta metro area saw similar changes in the quality of jobs as the number of premium jobs fell while the number of mid-range jobs increased.

## Data

The Quarterly Census of Employment and Wages' (QCEW) data set contains establishment ${ }^{2}$-level data collected by the Georgia Department of Labor. The data are compiled from quarterly returns filed by all employers covered by Georgia's unemployment
insurance program. This brief uses QCEW data from 2000, 2005, and 2009.

The QCEW data does not include self-employed individuals or members of the armed forces. A private establishment is included if it employs one employee for at least 20 weeks or has a quarterly payroll of $\$ 1,500$ or more. A farming establishment is included if it employs 10 or more employees for at least 20 weeks or has a quarterly cash remuneration of $\$ 20,000$ or more. ${ }^{3}$ The data includes local, state and federal government employment. Reporting the data is also limited by confidentiality rules.

The physical address for each establishment is included in the data set. The address information is geo-coded to provide a spatial reference for each establishment. The geo-coding process results in matching approximately 85 percent of all establishments and 92 percent of total employment to a location within the state. The match is not 100 percent because some QCEW returns contain missing or incomplete addresses or report addresses that cannot be geocoded, such as a post office box. Since the inability to geo-code an establishment is not randomly distributed, the undercount of employment is not likely to be uniform across municipalities. Because of this, our
analysis is more likely to under report employment in smaller, more rural municipalities, than larger ones.

## Number of Jobs by County

Table I describes the percentage of state total jobs by county for the years 2000, 2005, and 2009. Most interestingly, the table also shows the percentage change in employment by county over the past decade. As expected, the establishments within Fulton County make up the largest share of state employment. However, Fulton's employment share has fallen from 17.71 percent in 2000 to 16.91 percent in 2009 driven by an 8.3 percent drop in the overall number of jobs within Fulton County over the time frame.

Depending on the year examined, Cobb, Gwinnett, and DeKalb counties follow Fulton County as the next largest employment places. These three counties each represent about 7 percent of total state employment, or approximately 300,000 jobs. DeKalb County experienced job loss over the last decade of about II percent, whereas the number of jobs in Cobb County has stayed fairly consistent since 2000 with job loss of less than I percent. Gwinnett County experienced job creation in the early part of the last decade, but gave up some of those gains in the later part of the decade. The county experienced job growth overall during the 2000-2009 period of about 4.5 percent. Rounding out the top five, establishments in Clayton County or Chatham County, depending on the year, employ approximately 3 percent of total state employment.

The establishments within the 28 counties that comprise the Metropolitan Statistical Area of Atlanta represent a larger share of total state employment in 2009 than earlier in the decade, even though these counties did not experience job growth. Instead, total state employment dropped by more than employment in the metro Atlanta area causing the relative share of employment in the Atlanta area to increase.

Figures I-3 show the spatial distribution of jobs across Georgia's counties for each of the years. In the southern part of the state, the maps show clusters of economic activity in counties containing or adjacent to large cities. Over the last decade, many of these areas have lost "share" of jobs in the state. This is in contrast to the more populous northern part of the state where employment is much greater and more evenly distributed. These areas have gained job share. Figures 4-6 show the percentage changes in employment over the last decade. The changes in employment over this time frame are substantially different. During the first half of the decade, employment growth was much stronger; whereas, in the later half employment growth stagnated or receded due to the recession.

## Type of Job

Table 2 details the change in the types of jobs employed in each county. The two-digit NAICS codes are used to classify establishments by industry. The distribution of jobs by type is quite varied across the state. Educational services, health care and social assistance, public administration, leisure and hospitality, utilities, and professional, scientific, and technical services all experienced increased positive job growth during the last decade. Establishments in Agricultural, fishing, forestry, and hunting, Mining, Construction, Manufacturing, Wholesale and retail trade, Transportation and warehousing, Information, financial, and real estate, Management and administrative and support, and Other services experienced negative job growth state wide over the last decade.

## Quality of Job

The quality of each job is defined as premium, mid-range, or low-paying based on the average wage paid by each establishment. ${ }^{4}$ This classification is determined for each industry (NAICS code). Essentially, the quality of a job is based on the annual pay received by the worker. The premium job pays over $\$ 50,000$ per year; the mid-range job pays between $\$ 35,000$ and $\$ 50,000$ per year; the low-paying job pays below $\$ 35,000$. Table 3 presents the breakdown of the three categories by NAICS code. ${ }^{5}$

Table 4 shows the percentage change in the quality of jobs by county. The state of Georgia experienced a decline in both premium (-13.59 percent) and low-paying (-2.74 percent) jobs over the last decade. The mid-range jobs saw an increase of 3.55 percent over the 2000-2009 time period. The Atlanta metropolitan statistical area counties are adding mid-range jobs while losing premium jobs. Fulton County experienced almost a 10 percentage point decline in premium jobs in the last decade. Cobb County and Gwinnett County lost a smaller percentage, approximately 6 and 4 percent respectively; however, DeKalb County lost almost 40 percent of its premium jobs from 20002009.

The state as a whole is losing jobs in both premium and lowpaying categories and saw only some modest growth in the midrange jobs. The loss of premium jobs predates the current recession and in fact, the state shed a larger percentage of premium jobs from the 2000-2005 period than after (although the downward trend continued). The recession impacted midrange and low-paying jobs by reversing job growth seen earlier in the decade. The low-paying jobs experienced the largest decline in jobs during the 2005-2009 time period.

Eleven counties in Georgia had at least 100 percent growth in premium jobs over the last decade. ${ }^{6}$ Most of the job growth in
these counties came during the 2000-2005 time frame. While there is not one industry responsible for the large growth in premium jobs across all eleven counties, Professional, scientific, and technical services as well as Manufacturing experienced growth in several counties. Seven counties in Georgia experienced larger than 50 percent decline in premium jobs over the last decade. ${ }^{7}$ Again there is not a single industry driving the decline in these locations, but a combined effect from employment changes across the premium job industries.

## Conclusion

This brief provides a dynamic picture of the employment across the state. The state of Georgia appears to have lost a significant share of its premium jobs, while replacing some of these jobs with mid-range jobs. The counties within the Atlanta metropolitan statistical area are experiencing a similar situation but are replacing more of the lost premium jobs with mid-range jobs. In general, the metropolitan area is increasing its share of jobs in the state, but this is largely because these counties are just not declining as fast in job losses. Certain areas outside the metro area are doing quite well with growth in premium jobs driven by the Professional, scientific, and technical services and Manufacturing sectors, while those who have lost the largest percentage of jobs outside the metro area are largely seeing declines not driven by a few sectors but losses in a number of various sectors.

## Notes

I. These data represent the Georgia Department of Labor data that the Fiscal Research Center maintains. The data received minor cleaning and also geo-coding.
2. The unit of observation of this dataset is the establishment and not an employer. In some cases, a single employer has multiple locations. In this analysis each establishment is treated independent of any other establishments. In addition, there are cases where an individual is associated with multiple establishments usually because they have more than one job. In this case, the worker is included in the employment statistics of each establishment to which they are associated.
3. The employer handbook provides more information on which establishments are included and exactly what is reported. http://www.dol.state.ga.us/em/unemployment_ taxes_and_benefits.htm
4. Average wages for each establishment is computed as total establishment payroll divided by total establishment employment.
5. The breakdown presented in Table 3 follows closely the Georgia State University Economic Forecasting Center's quality of jobs description.
6. These counties include: Chattahoochee, Quitman, Long, Webster, Monroe, Screven, Barrow, Bryan, Calhoun, Dawson, and Taliaferro.
7. These counties include: Marion, Harris, Dooly, Clarke, Ben Hill, Twiggs, and Atkinson.

## ABOUT THE AUTHOR

Zackary Hawley is an Assistant Professor of Economics in the AddRan College of Liberal Arts at Texas Christian University. He has published research on topics related to public finance and urban economics. He holds a Ph.D. from Georgia State University.

## ABOUT FRC

The Fiscal Research Center (FRC) provides nonpartisan research, technical assistance and education in the evaluation and design of state and local fiscal and economic policy, including both tax and expenditure issues. Established in 1995, the FRC helps provide information to state and local governments so they can make informed decisions about complex fiscal issues. The Center has a full-time staff and affiliated faculty from throughout Georgia State University and elsewhere who lead its research projects.

FRC Reports, Policy Briefs, and other publications maintain a position of neutrality on public policy issues in order to safeguard the academic freedom of the authors. Thus, interpretations or conclusion in FRC publications should be understood to be solely those of the author(s).

For more information on the Fiscal Research Center, call 404.413.0249.

## RECENT PUBLICATIONS

The Changes in Jobs Across Georgia's Counties: Changes in Distribution, Type, and Quality of Jobs in Georgia Counties from 2000-2009. This brief discusses the changes in the distribution, type, and quality of jobs and examines the changes in percentage by county of total state employment. (December 2012)

A Snapshot of Georgia School District Expenditures and the Response to the 2008 Recession. This brief provides a short review of expenditures in Georgia's school districts over the past decade (200I-201I) with a particular focus on school district cutback responses to the 2008 recession in overall expenditures as well as within various expenditure categories. (November 2012)

Impact of the Recession on School Revenues Across the State. This report examines the impact of the 2008 recession on inflation-adjusted, per pupil revenues in Georgia and explores the characteristics of districts most adversely affected by revenue shortfalls. (November 2012)

School Facility Funding in Georgia and the Educational Special Purpose Local Option Sales Tax (ESPLOST). This report reviews Georgia's system of school facility finance, emphasizing the role of the Educational Special Purpose Local Option Sales Tax (ESPLOST). (October 2012)

Georgia's Revenue and Expenditure Portfolio in Brief, 1989-2009. This brief uses Census data to examine how Georgia ranks in terms of spending and revenue by functions and objects and examines how Georgia's portfolio has changed over time compared to national peers. (August 2012)

Butts, Carroll, Cherokee, Clayton, Cobb, Coweta, Dawson, DeKalb, Douglas, Fayette, Forsyth, Fulton, Gwinnett, Haralson, Heard, Henry, Jasper, Lamar, Meriwether, Newton, Paulding, Pickens, Pike, Rockdale, Spalding, and Walton.

Table 3. Classification of the Quality of Jobs

| NAICS Codes | Type of Job |
| :---: | :---: |
| Premium Jobs |  |
| 21 | Mining |
| 22 | Utilities |
| 33 | Manufacturing |
| 42 | Wholesale Trade |
| 51 | Information |
| 52 | Finance and Insurance |
| 54 | Professional, Scientific, and Technical Services |
| 55 | Management of Companies |
| Mid-Range Jobs |  |
| 23 | Construction |
| 31-32 | Manufacturing |
| 48-49 | Transportation and Warehousing |
| 53 | Real Estate and Rental and Leasing |
| 61 | Education |
| 62 | Health |
| 92 | Government |
| Low-Paying Jobs |  |
| 11 | Farming |
| 44-45 | Retail Trade |
| 56 | Administrative and Support |
| 71 | Leisure |
| 72 | Hospitality |
| 81 | Other Services |

NOTE: The missing NAICS code is included in the premium jobs category because the average annual wage in that category is larger than \$50,000.

Table 4. Percentage Change in Quality of Jobs by County
