African Tax Institute, University of Pretoria

What to Expect from our Demographic and Economic Trends

THE
CENTER
FOR
STATE
AND
LOCAL
FINANCE

Overview

- Headliner trends:
 - Demographic:
 - Age composition
 - Income distribution
 - Migration patterns
 - Race and ethnicity
 - Employment and output sector shifts
 - Service sector growth
 - “Knowledge sector” growth
 - World-wide economy
 - No two states or regions affected exactly the same

How might public finances be affected?

- Public sector demands for a good or service are driven by:
 - Segments of the population needing it
 - Cost of providing it
 - Capital needs
 - Rational reason for government provision in the first place!
- Paying for those goods and services is driven by:
 - Revenue → base, who pays, rates
 - Borrowing → ability to repay, access to markets
 - Intergovernmental aid → non-discretionary, income, population

The big one: Aging

- Change is well established—most regions will see a substantial increase in the percent “elderly”

Percent of Population of Working Age (25-64 Years) in 2000

Percent of Population of Working Age (25-64 Years) in 2016

Percent of Population of Working Age (25-64 Years) in 2030

And

Percent of Population of Age 65 or Older in 2000

Percent of Population of Age 65 or Older in 2016

Percent of Population of Age 65 or Older in 2030

Data was collected through Census Bureau population estimates by State and age

Implications

- Increased demand for:
 - Transportation
 - Specialized housing
 - Medical support
- Revenue:
 - Decline in growth of sales tax base (non-taxable services)
 - Decline in growth of income tax base (non-taxed pensions, SS)
 - Ptax—non-owner occupied?
- Regionally: Quite similar
- Pensions and SS at risk? Age-dependency ratio

Age dependency ratio: Impact retirement support

Income composition: Growth in less taxed transfers—trend continues

Personal Income 1970-2016

Summing up

- Where do these trends lead?
- Matrix of major changes and implications, see example:

Economic/Demographic Variables	Recent and Future Trends	Anticipated Impact on public finances	Options
Personal income	Growth in overall personal income. The composition has changed and shows an increase in nonwage and salary components including transfer payments. Higher income families hold an increasing share of total US income. Fast-growth regions of the 1980s (West and parts of the South) have slowed considerably.	REVENUE: Reduced taxable income base, most directly affecting state and local individual income taxes. Relative increases in income for high-income families could increase income-tax revenues for states with progressive marginal tax-rate structures.	Broad-based income taxes may mitigate some of the issues related to growing retirement income. In general, an annual review of tax expenditures could help to highlight the impact of exemptions over time.
Population	Increased proportion of the elderly in the population and increased growth in school-aged children over the next ten to fifteen years. Increased dependency ratio in all US regions, with the largest growth coming in the West.	REVENUE: Property-tax exemptions for the elderly could expand. Changes in consumption patterns may reduce the growth of taxable sales by the elderly and changes in ethnicity may also affect the sales tax base. EXPENDITURE: Increased demand for services, especially health care and transportation. Increased demand for improved educational outcomes (and a likely call for increased expenditures for education to support diverse population).	Broad-based sales and income taxes will reduce the impact of changes in consumption patterns and income generation. Diversification of school financing to include support from the federal and state governments should be further investigated.
Employment/Output	Continued shift from manufacturing employment and output to service employment and output. E-commerce as an increasing way to do business.	REVENUE: Increased cost of tax administration to locate service-based and Internet sales. Potential reduction of property tax on inventories and buildings and other capital. EXPENDITURE: Increased demand for expansion of technology and telecommunications infrastructure.	Continued development of cooperation in sales taxation across jurisdictions is important to reduce the impacts of Internet sales. Expanding the sales-tax base and training to improve the efficiency of tax administration for a service-based economy may bolster the sales tax.
Consumption	Increase in consumption of services throughout the last decade.	REVENUE: Increased consumption of largely nontaxed goods will lower the growth in sales tax revenue over time.	Broad-based sales taxation will help to mitigate changes in consumption.

- Thank you—questions and comments welcome:
